

PCE Quick Reference Cheat Sheet

Start / Stop

```
docker compose up -d           # Start everything (agents OFF)
docker compose down           # Stop everything
docker compose --profile agents up -d  # Start with agents ON
docker compose down --remove-orphans  # Clean stop including agents
```

Logs

```
docker compose logs -f api
docker compose logs -f celery_worker
docker compose logs -f celery_beat
docker compose logs -f db
docker compose logs -f agent_orchestrator
```

Health Checks

```
curl http://localhost:8000/health
curl http://localhost:8000/health/agents
curl http://localhost:8000/docs
```

Admin Auth

```
curl -X POST http://localhost:8000/api/v1/admin/auth/login -H "Content-Type: application/json" -d
  ↪ '{"email":"admin@yourdomain.com","password":"your_password"}'
```

Database

```
docker compose exec db psql -U price_engine -d price_comparison
docker compose exec -T db psql -U price_engine -d price_comparison < scripts/migrate_v1_to_v2.sql
```

Redis

```
docker compose exec redis redis-cli -a your_redis_password
```

Flutter

```
flutter pub get
flutter run
flutter build apk --release
```

Agent Toggle

```
# 1. Edit .env -> AGENTS_ENABLED=true
# 2. docker compose up -d
# 3. docker compose --profile agents up -d
# 4. curl http://localhost:8000/health/agents
```
