

---

## PCE Backend — Quick Startup Reference

---

### — 1. Infrastructure —

```
docker compose up -d db redis
```

### — 2. FastAPI —

```
uvicorn app.main:app --reload --host 0.0.0.0 --port 8000
```

### — 3. Celery Workers —

#### Terminal A (default queue: scraping, emails, budgets)

```
celery -A app.celery_app:celery_app worker -Q default --loglevel=info --concurrency=4 -n worker_default@%h
```

#### Terminal B (high priority: push, autobuy, real-time)

```
celery -A app.celery_app:celery_app worker -Q high_priority --loglevel=info --concurrency=2 -n worker_priority@%h
```

#### Terminal C (beat scheduler)

```
celery -A app.celery_app:celery_app beat --loglevel=info
```

### — 4. Health Checks —

```
curl http://localhost:8000/health celery -A app.celery_app:celery_app inspect registered celery -A app.celery_app:celery_app inspect scheduled
```

### — 5. Docker Compose (all services) —

```
docker compose up -d
```

### — 6. View logs —

```
docker compose logs -f api docker compose logs -f celery_worker docker compose logs -f celery_worker_priority docker compose logs -f celery_beat
```
